VRS VirtualReScan™

Virtual ReScan software uses image enhancement technology to provide the best quality images to your system with minimum of effort.

VRS. The advanced technology in VRS 4.1 literally cleans scanned images. This makes for a big improvement in the accuracy of your optical character recognition (OCR) and handwriting recognition (ICR) software. Plus the file size of the resulting images is smaller than without VRS. And this should please bandwidth deprived networks everywhere. What's more, VRS significantly reduces document preparation tasks and manual activities that cost your organization time and money.

KOFAX
